

My prototype. I think the planform could make a very competitive A-6 if cambered 1/16 x 1/32 ribs and c-paper covering were used.

Hope you all enjoy the plan. I'd love to see a few more built.

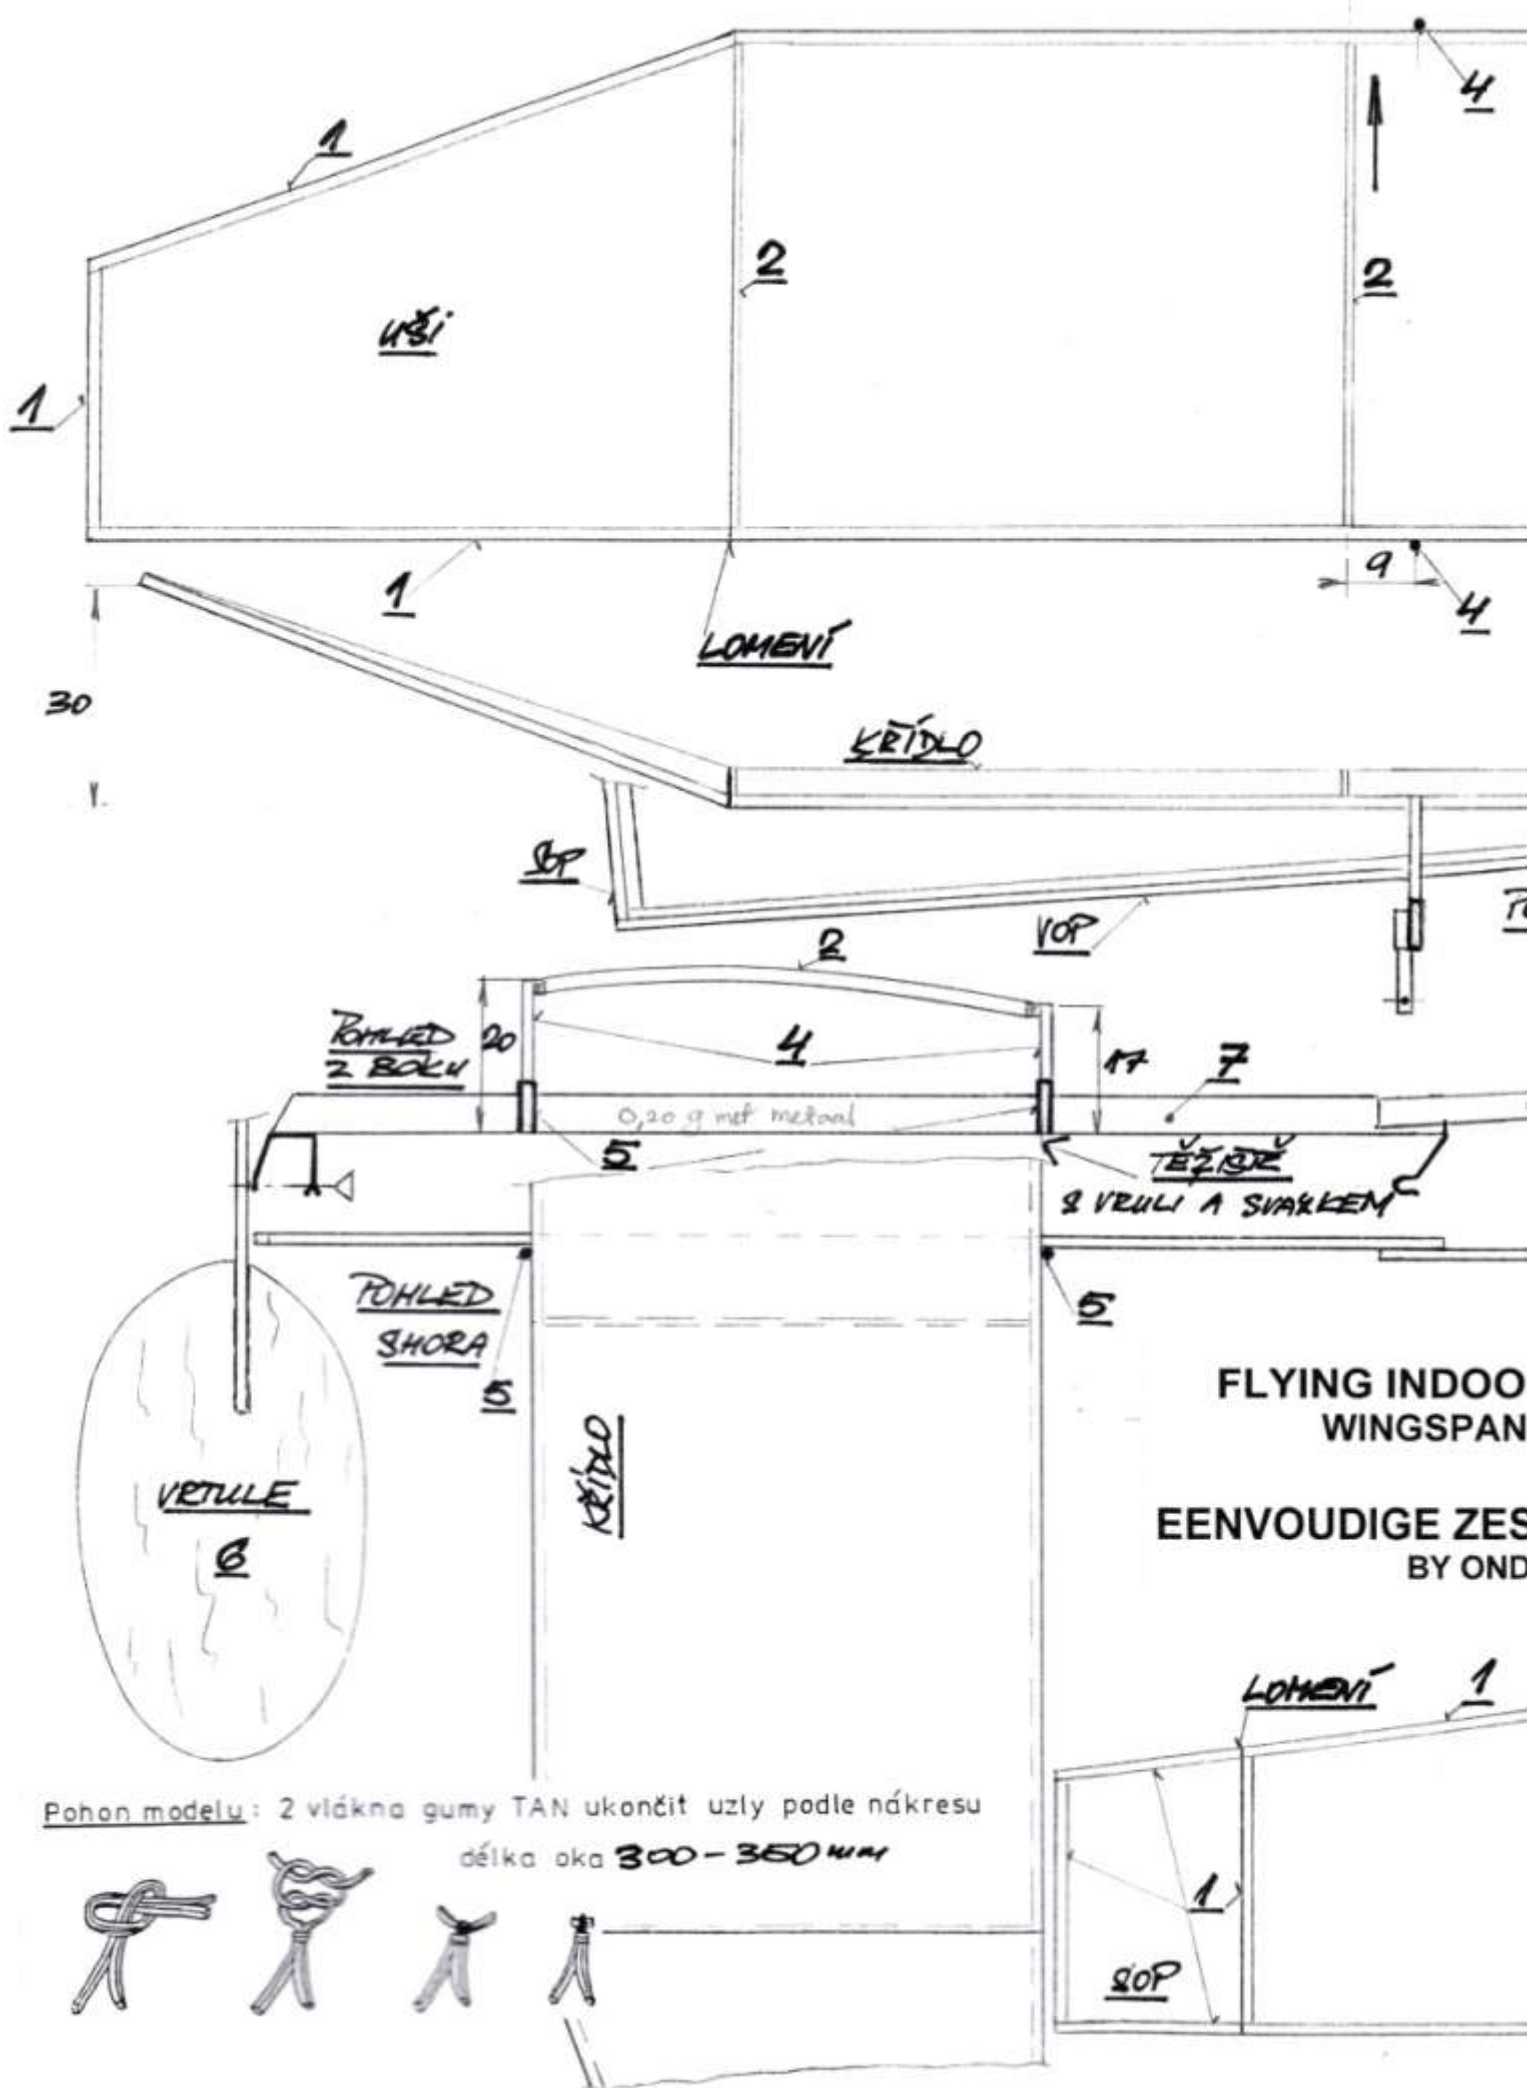

This month, I'm delighted to offer something I designed to be super-easy to build, contest-worthy, and cute. This very simple A-6 is designed to be built right on ironed Esaki taped over the plan. Ideal for group builds, like Alinda, Jorik, and I in State College (above).
